ATTACHMENT

1. An Applicant's Request for Reconsideration filed on January 29, 2004 has been received and carefully considered. Overall, claims 1 and 4-13 are pending in this application.

Specification

2. The disclosure is objected to because on page 4, paragraph 0014, not 0012, the sentence is incomplete. Appropriate correction is required.

Response to Arguments

3. Applicant's arguments with respect to Hirota et al. applied in the previous Office Action have been fully considered but they are not persuasive.

In response to applicant's argument that Hirota et al. fail to detect an exothermic reaction across the catalyst and measure a temperature of an output of the catalyst in response to the detected exothermic reaction (page 5 of Request for Reconsideration), the examiner respectfully disagrees. As shown in Figure 14 and indicated on lines 28-33 of column 9, Hirota et al. detect a temperature difference ($\Delta t = t2 - t1$) indicating an exothermic reaction across the catalyst (step 608), wherein t1 is a measured temperature of an inlet of the catalyst (6) and t2 is a measured temperature of an output of the catalyst. Also in this step, the temperature of an output of the catalyst (t2) is measured in response to the detected exothermic reaction. Thus, Hirota et al. clearly disclose the claimed features of the pending application.

In response to applicant's argument that the references fail to show certain features of

applicant's invention, it is noted that the features upon which applicant relies (i.e., a detected

exothermic reaction across the catalyst is defined as a condition when a temperature difference

across the catalyst is greater than a threshold reference temperature) (see page 4 of Request for

Reconsideration) are not recited in the rejected claim(s). Although the claims are interpreted in

light of the specification, limitations from the specification are not read into the claims. See In re

Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).
